Retreat Property Pricing

Summary of Pi Mi's property and a first, deliberately modest, run of the numbers. September 2026.

The property

- Nine bungalows in total, all included in the rental.
- Five older small bungalows. Refurbished with new wood and new floors, well maintained. No AC yet, but Pi Mi is likely to add it soon.
- Four modern one-bedroom lofts. Sofa beds are unconfirmed but likely. Each fits at least two people, possibly four depending on setup.
- About three rai of land. Pi Mi can offer more land at the back if a renter wants to build.
- Shala of roughly 200 square metres. It has held 50 to 70 people for contact dance jams. A comfortable yoga-mat capacity is around 30 to 35.
- Restaurant on site, included in the deal.
- Sleeps 9 people at one per room, or around 15 if some rooms sleep two.

What Pi Mi wants

- Rent out the entire property as one package.
- She does not know how to price it. Her initial ask is about 300,000 baht per month for everything.

Pricing assumptions

- Deliberately conservative figures. The place could do way more, but the idea is to start with the most modest model and see whether the base case holds up.
- Five small bungalows: 1,000 baht per night each.
- Four modern lofts: 2,000 baht per night each.
- Rooms modelled at 50 percent occupancy.
- Shala: 6,000 baht per day at 40 percent occupancy.
- Restaurant: 700 baht per head per day, minus 30 percent food and running costs.
- Maintenance: 30 percent of total revenue.
- Restaurant guests track room occupancy, so roughly 7 to 8 guests eating per day.

The modest model, per 30-day month

Line	Baht per month
Rooms, 13,000 per night at 50 percent occupancy	195,000
Shala, 6,000 per day at 40 percent occupancy	72,000
Restaurant, 700 per head, about 7 to 8 guests per day	157,500
Gross revenue	**424,500**
Restaurant costs, 30 percent	-47,250
Maintenance, 30 percent of revenue	-127,350
Net before rent	**249,900**
Rent at Pi Mi's ask	-300,000
Result	**-50,100**

If only one person sleeps per room, restaurant guests drop to about 4 to 5 per day and the monthly shortfall grows to roughly 75,000 baht.

What this means

- Under the modest model the property loses about 50,000 baht per month at a 300,000 baht rent.
- For the rent to break even the place needs higher nightly rates, higher occupancy, or a rent closer to 200,000 to 250,000 baht per month.
- The restaurant is the biggest revenue driver, so guest count and food pricing move the result more than anything else.

Open questions

- Which model applies: a straight rental to retreat organisers, or the renter running their own ongoing operation?
- Do sofa beds exist in the lofts, and what is the true sleeping capacity per unit?
- What is the realistic Shala capacity for yoga?
- Any pricing comparables to sanity-check the nightly rates?
